

CETIM

Year	2017
Place	SENLIS - 60 - France
Sector	Aerospace
Field	Air treatment
Type	Test equipment ventilation
Price	11 600 €

The aerospace branch of CETIM is constantly adapting its **test means** to satisfy the requirements of its hi-tech market. Certain types of mechanical tests carried out at Senlis are also performed in the **dB Vib Consulting laboratory** in Vienne. This enables the two companies to share their respective experiences.

This time it is dB Vib Ingénierie who have been called upon to **handle the ventilation of an experimental test rig** situated in a room initially designed for other tests.

The result is a **unique customised set-up** which is **highly efficient and silent** and which clearly shows the **flexibility of our design office capabilities**.
