

ALBIOMA

Year	2015			
Location	LA REUNION -974 - France			
Sector	Energy			
Field	Air Treatment			
Type	Central Vacuum Cleaner System			
Amount	1k€	10k€	100k€	1M€

ALBIOMA, on the BOIS ROUGE site on Réunion Island recycles the sugarcane wastes (bagasse), to produce energy. **dB Vib Ingénierie** has intervened to **design and install an high power central vacuum suction system (NCV)** (vacuum unit 30KW).

The bagasse is a very volatile and corrosive element, dB Vib took these strains into account to **reliably prevent corrosion** related to the product and the weather conditions of the site.

The Albioma workers can today **efficiently dust** the bagasse areas and work in **an healthier environment**.
