

## ANDRITZ

Year	2016
Location	MAISONS LAFFITTE - 78 - France
Sector	Environment
Field	Sound Insulation
Type	Enclosures on centrifuges
Amount	1k€    10k€    100k€    1M€

The SIAAP modernizes and expands its plant "Seine Avale" that has become the second largest water treatment station in the world.

Within the context of its environmental approach, the SIAAP program includes **noise levels that fall below the regulatory levels** in rooms.

dB Vib offered to ANDRITZ a solution including an **enclosure for five centrifuges**. Each centrifuge has its own enclosure in order to avoid creating an user zone too noisy. Our booths are equipped with **roof hatches to allow the use of bridge crane** during maintenance periods.
