<b>Sector</b>	Automobile			
<b>Field</b>	Test equipment			
<b>Type</b>	Sound measurement booth			
<b>Price</b>	1k€	10k€	100k€	1M€

Bosch Automotive Steering in Vendôme wished to **renew and improve their acoustic test booth** for steering columns.

Drawing on its experience, dB Vib Ingénierie was able to propose a test booth **providing the acoustic performance** requested:

- Background noise less than **20 dB(A)**
- **Vibratory separation** of the room
- Reverberation time less than **0.2 seconds**.

dB Vib designed and installed the booth in a restricted space while ensuring the accessibility and ergonomics for the operator performing the tests.
