Field	Soundproofing			
Type	Silencer and baffles			
Price	1k€	10k€	100k€	1M€

dB Vib travel worldwide to share their expertise, but it also happens that projects take place a few kilometres from our offices. **The modernisation of STEP** situated south of Vienne is a local project that is particularly dear to us. The operator appointed VEOLIA to **develop a Biogas production unit**. During the works, we **installed 2 silencers for the ventilation of the premises**. As the noise problem was properly anticipated from the start, the compressors have never represented a nuisance for the neighbours, who are nevertheless quite close.

The station is currently a good example of **integration** and an **ecological model** with its new activity. Situated on the banks of the Rhône, opposite the Côte Rôtie vineyards, it even has a visitor's circuit to allow the public to see its operation and improve image that we have of sewage treatment stations.
