

## VEOLIA

<b>Year</b>	2016			
<b>Place</b>	ROSNY sur SEINE - 78 - France			
<b>Sector</b>	Environment			
<b>Field</b>	Soundproofing			
<b>Type</b>	Acoustic treatment			
<b>Price</b>	1k€	10k€	100k€	1M€

The noise emissions by the Rosny plant were **higher than the limit fixed the regulations**. During joint inspections by **dB Vib Consulting** our teams **identified the main sources and** imagined treatment solutions to **reduce the emissions below the regulation levels**. This type of organisation allows us to combine good technical knowledge and acoustic expertise to **match the solution to the goals fixed by the inspecting bodies**.

In this way we produced a **customised screen** serving to **compartmentalise a room and separate a group of deodorisation fan pumps**. This screen is positioned at the point where the pump pipes cross. As the effectiveness of the screen depends on good sealing, our head erector carried out sterling work to **ensure the performance** that we guaranteed.
